Some of the early AutoCAD users were "Atlas users" who built their houses using a scaled-down version of the 1970 Atlas architectural drawings. In 1985 Autodesk released AutoCAD LT, a less-expensive, non-graphical desktop CAD program. In 1988, AutoCAD was released as a 3D CAD package for the first time, competing with some of the other prominent 3D CAD packages in the market, such as NBS CAD and DASS. History AutoCAD's architecture was based on the work of Ford's Pre-Visualization Engineering (PVE) System, a single-user tool used in the manufacture of steel beams. In 1970, PVE was replaced by CAD (Computer Aided Design) System - a computerized drawing system which was considered to be a major improvement over PVE. The first AutoCAD desktop version was a work in progress for five months, to be released on January 1, 1982. The first releases of AutoCAD were targeted at the drafting market, not all markets like architectural design or civil engineering. According to the company, "you could be a sketcher, you could be a designer, or you could be a draftsman or an architect. You could be a drafter, you could be a designer or an architect. You could work alone or you could work on a team." In 1993, AutoCAD was renamed AutoCAD LT, which was developed to allow the product to run on low-end personal computers. In 2007, AutoCAD was re-branded as AutoCAD 2007. The original AutoCAD had no ability to draw; rather, it stored and edited 2-D drawings called "screens." A screen could hold two layers of crosshairs, and could be used to select an area of a drawing and then draw a line, curve or point within that area. The first "AutoCAD drawing" was a design sketch, which was stored as a bitmap image file on a video floppy disk. For simple drawings, this was adequate, as they would be drawn on a screen by the AutoCAD operator using the keyboard and mouse. It was not until the advent of the structured drawing file, the DXF (Design Exchange Format), that the ability to store, modify and store a 3-D representation of a drawing was added to AutoCAD. The first company to apply the structure of a drawing to the design of a

In-house development projects In-house customizations to AutoCAD's native commands have been made by: AutoDesk CreativeSketch: an internal graphics application at the now defunct Autodesk. : a second-generation AutoCAD on the MPX platform. : an internal application used to create and manipulate mathematical forms. : an internal application used to create and manipulate mathematical forms. : an internal application used to create and manipulate mathematical forms. : an internal application for computer-aided drafting of images. The products developed at Autodesk Labs in the former Creative Development Group division include: The DesignLink'source code viewing application', which is integrated with AutoCAD's native API. This allows design review of drawings by other designers. AutoCAD MapServer, a web map service for AutoCAD map viewing. New licensing structure AutoCAD 2011 introduced a new licensing structure that is a combination of an annual subscription licensing model and a perpetual license. The new licensing structure allows for support in perpetuity, without the need to constantly renew the license. New features can be made available by adding new features to AutoCAD, but older features are not affected. Licensing changes include: For perpetual users, a discount rate on price and a discount on perpetual licenses will apply. Maintenance releases are also free of charge. For annual subscribers, the rate for maintenance releases is increased. Subscription model With the subscription model, users who have a perpetual license are billed by the year for the perpetual license, which gives access to all updates and features for the year. In addition, perpetual license users are also billed for maintenance releases. Subscription model users can pay the basic price for the year to access updates and feature releases for that year, and then pay an additional annual fee for the subscription. Existing users of the perpetual licensing model were automatically transitioned to the subscription model. These perpetual license users were given a one-year "free trial" before being placed in the subscription model. New users can purchase either a perpetual or subscription license. New users can choose to use the subscription model for a year at the current perpetual license rate or a new perpetual license. After one year, new users can choose to remain a perpetual license user or switch to the subscription model, but after that, each year the subscription model will apply. If a new user remains in the subscription model for their entire career, the subscription model is a1d647c40b
