
Microsoft Access Driver (* Mdb * Accdb) For Windows 7 64 Bit [UPD]

Aug 26, 2019 This is the source code of mdb1.c and md52.c drivers. For Windows 32-bit, it is provided as mdb1.c and md52.c driver files. Microsoft has other accessibility related drivers, see Accessibility section for more . Sep 26, 2016 On my 64 bit Windows 7 machine, the Microsoft Access ODBC Drivers is not installed, instead, I have the Microsoft Access Database Engine Drivers. So, go to C:\Windows\SysWOW64\odbcad32.exe and you will find the 32 bit drivers. For the previous download of the 32 bit drivers, the installers contain the drivers and their setup files. You'll need to make sure the SQL Server Setup is installed on your machine, and to be sure you have the right version of the driver, check the compatibility list here: Microsoft Access Driver - SQL Server. A: I'm having trouble using the ADODB.Connection object. I'm able to open a connection and send a command just fine. However, I'm not able to receive the result of the returned query from my SQL Server back to me. The following code is what I'm currently running to send a command to the SQL Server database. Set conn = CreateObject("ADODB.Connection") conn.Open "DRIVER={SQL Server};DATABASE=myDB;UID=myUser:Password=12345" Set cmd = CreateObject("ADODB.Command") cmd.ActiveConnection = conn cmd.CommandText = "SELECT * FROM myTable" cmd.CommandType = adCmdText cmd.CommandTimeout = 30 Set rs = cmd.Execute() If Not (rs.EOF And rs.BOF) Then debug.print rs("someRow") End If The debug.print line fails in that it does not return any data at all. At first I tried using cmd.CommandText = "SELECT SomeColumn FROM myTable" and I got an ORA-00918: column ambiguously defined. So I tried cmd.CommandText = "SELECT SomeColumn FROM myTable:DROP TABLE myTable;" and that solved the ambiguous column problem, but the query actually failed with ORA-00905: missing keyword. I'm not sure what
